

# SAGO NETWORKS

The Internet Solutions Company

## Sago Networks is now more capable than ever to handle all of your IT service needs.

### CO-LOCATION

Multi-site World Class Data Centers offering customized space to fit your business needs.

### CONNECTIVITY

Private network for fast and secure delivery of patient data and imaging records.

### DATA STORAGE

Off-site facility with elite security credentials that surpass industry standards, and data storage backed by the technology's finest equipment.

### MANAGED SERVICES

Well trained, certified, and experienced support for application systems.

**Fiber & Wireless Connectivity:** Building on a strong fiber optic and high capacity wireless backbone, Sago Networks can offer enterprise level, carrier class broadband. Sago's privately owned network provides vast amounts of bandwidth options to businesses that need guaranteed rates; not just speeds "up to" most providers offer that slows down during peak times. Secure transmission with the highest level of encryption using the Advanced Encryption Standard (AES), we provide all companies with a safe way to communicate over the Internet and via a private network.

**Colocation:** If you need one unit or an entire cage, Sago provides secure card access, installation support in a lockable cabinet. Our power runs through multiple power management modules with static transfer switches for redundancy. In the event of an outage, Sago has UPS backup and N+2 1.6MW diesel powered generator. And with 5 Tier 1 providers and direct fiber access into both NAPs of the Southeast, your servers always stay connected.

**Back-up and Storage:** Secure back-up and storage using advanced IBM devices to store your information safely and securely. Sago offers deep archival storage, producing disk-to-disk-to-tape solutions to store unlimited amounts of data. Secured storage facility open 24 hours a day, 7 days a week and 365 days a year. Our customers have unlimited access over their private and secured network to their servers and information any time of day.

**SagoSAFE:** The only solution that includes all three aspects of data protection: encryption, transport and storage. Offering security to those in the medical field with encrypted transfers of information up to 150Mbps and a secure storage solution, SagoSAFE can handle multi-terabyte capacities on our state-of-the-art IBM SAN in Atlanta, GA. Perfect for any radiologist who wants to reduce the time it takes before a patient gets their results. HIPPA certified for security, DOD used nationwide.
